

9 September

Day 1

Data pipeline

Clickstream Data

Production Data

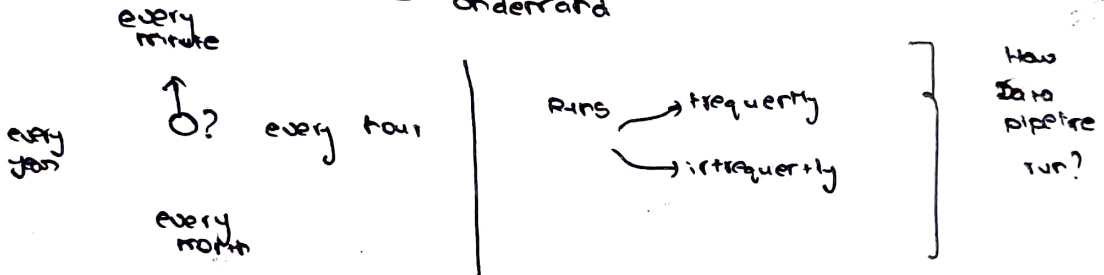

thirdparty

- CRON

- Realtime

- Ondemand

Realtime Data Pipeline { give the alert }

CRON is a tool to automate scheduled task

Kafka

Producer

Topic

publishes an event

Event stored?

Reads an event

consumed multiple times!!

CONSUMER

Notification

Payment

who subs to the topic will be notified

Partition || consumer group

Multiple consumers

Eg:

order service

[Data origin]

upstream

publishes event

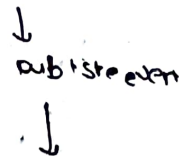

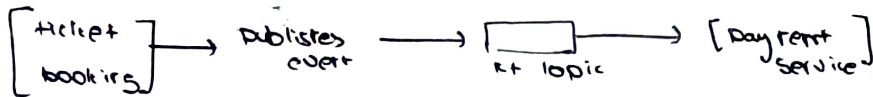

kafka topic

reads event

payment service

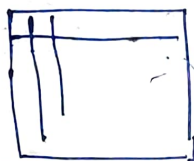

[Data Recipient]

Downstream

[Notification] ↓ Down ?

— xx — Day 2 10 Sept 26
why Data Modeling?

Big table

- Tailored
- Retested

sources

for report

- Business Rules & Logic // Store in database ✓

Big table

Same problem

Business Rules will be different

Sales report?

Business Manager

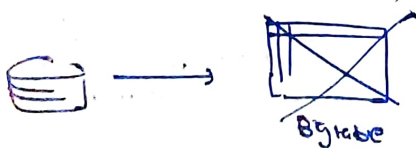

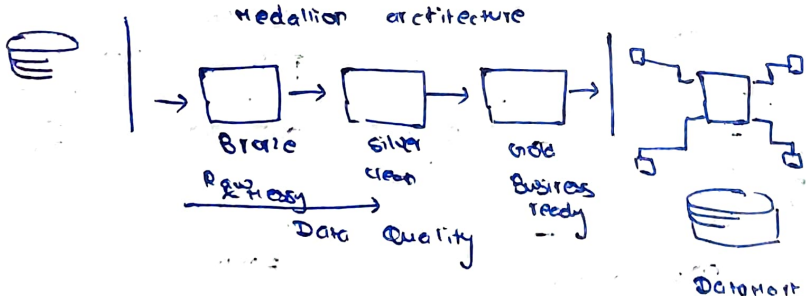

customer report?

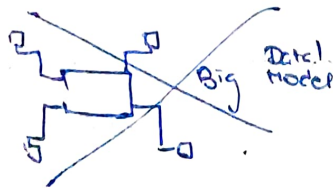

- variable ? x

- More sense ? ✓

Data Engineer

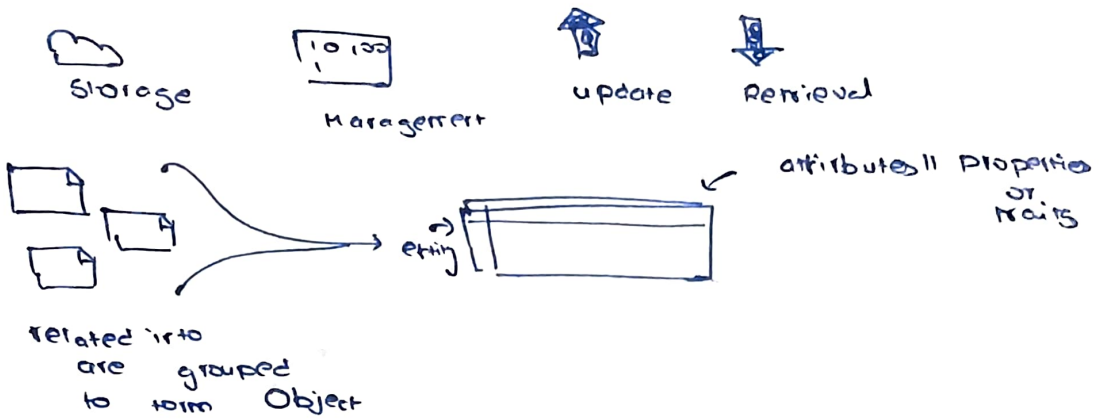

Data Models
Based on domain

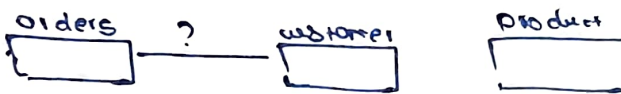

Data - collection of information

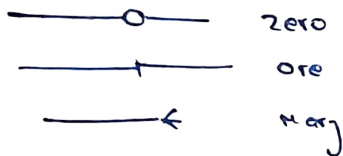

Database - C.O.T.I.T.O stored in a structured way for

Amazon have lot of moving into

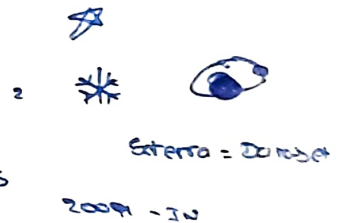

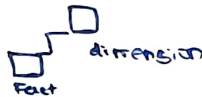

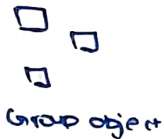

cardinality // relationship between two entity
ON Mathematical context

- 11 Sept

What is Data Model?

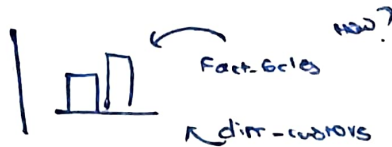

Fact-table // what happened?
dimension // what? what how

core
ID + numbers + dates
attributes

Relationship?

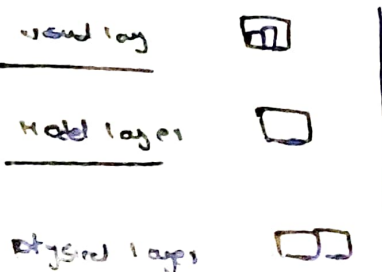

Model layer

Visual layer

200M 007-1507
